Egg Carton Count

Make the numbers from 1 - 6 or 1 - 12 to put in the bottom of either an egg carton space or a muffin tin space. Have your child count out that many pieces of something (acorns, rice, cereal, etc.) and put them in that slot.

What this is teaching:

a) Your child is seeing the numbers and learning that they represent "how many."

b) Your child is practicing counting items, which will help them with estimating items as they grow older.
